Document Centre C-250/ 360/ 450 Series	CT350352	16K

## REMANUFACTURING PROCESS:

INSPECTION	All used drum units are carefully inspected and allowed to be sent for remanufacturing only if all parts are in good condition.
CLEANING	Thorough cleaning is carried out on all drum unit parts to ensure removal of contaminants.
REPLACEMENT OF CRITICAL COMPONENTS	Brand new and matched components including <i>OPC Drums</i> , <i>Cleaning Blades</i> and <i>Charge Rollers</i> are installed in every refurished drum unit. Each component goes through stringent testing before being selected for installation. Magnetone (Roller Mfg Division) manufactures own range of charge rollers for laser and copier applications, further ensuring all critical components are 100% fully compatible and offer OEM-equivalent results.
PACKAGING	Custom-made <i>double layer</i> packaging provides maximum protection during transportation.
